

One Number System (ONS)

William Cobb

VP, Network Engineering

CSDVRS

29 April 2008

ONS Executive Overview

The ONS goals are to provide people who are Deaf and hard of hearing:

- 10 digit phone number that anyone can call
- Allow anyone to call you on your video phone from any video device...simply by registering with ONS
- E9-1-1 from any and all provider...safety
- Can be implemented in 2008 with all installed equipment
- Freedom of choice...you get your number...then you decide what provider
- Fair and balance competition...all providers have minimal investment

ONS features

Neutral Central Numbering Database

Acquires, distributes and maintains telephone numbers

Maintains correlation between phone and user IP address

Establishes and maintains user location information

One system for all providers

Built using existing proven technologies

Bridging system...supports present technologies with flexibility for future innovations

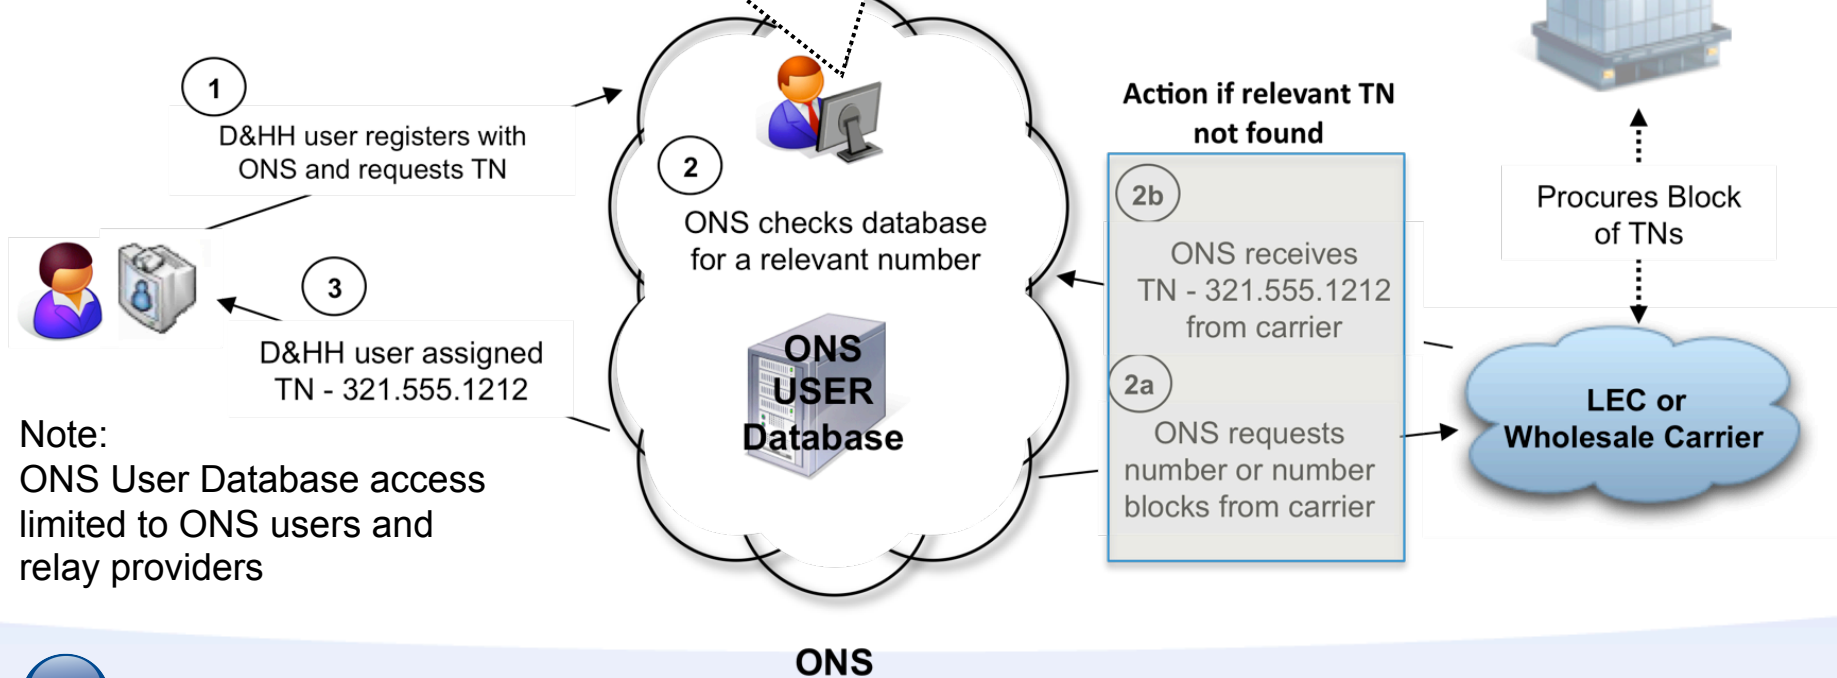

Getting your number...no pressure

“Just need the following information”

- a. Name
- b. Address
- c. Email address

“We’ll get the your telephone number and set you up in the system”

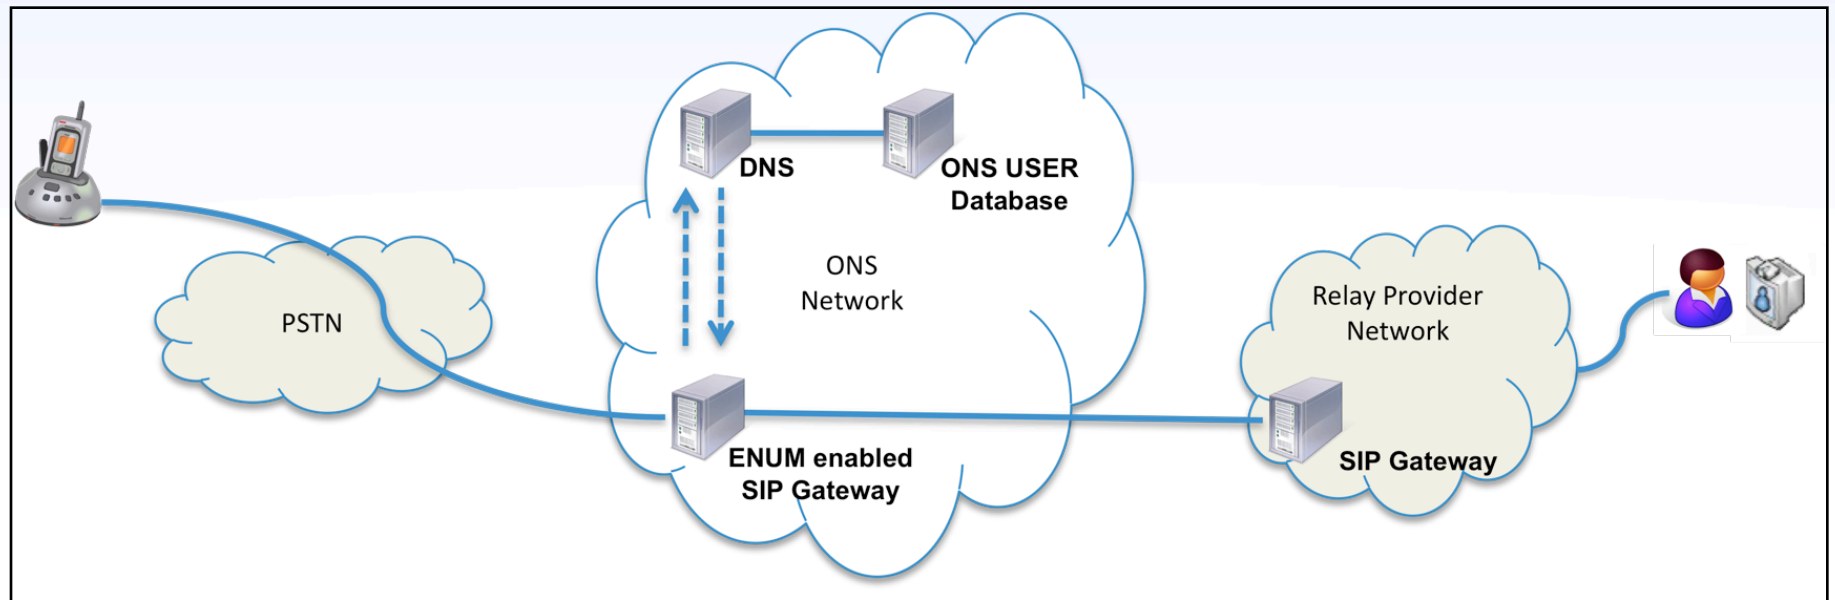

Registration via point-to-point call

Note:
ONS User Database access limited to ONS users and relay providers

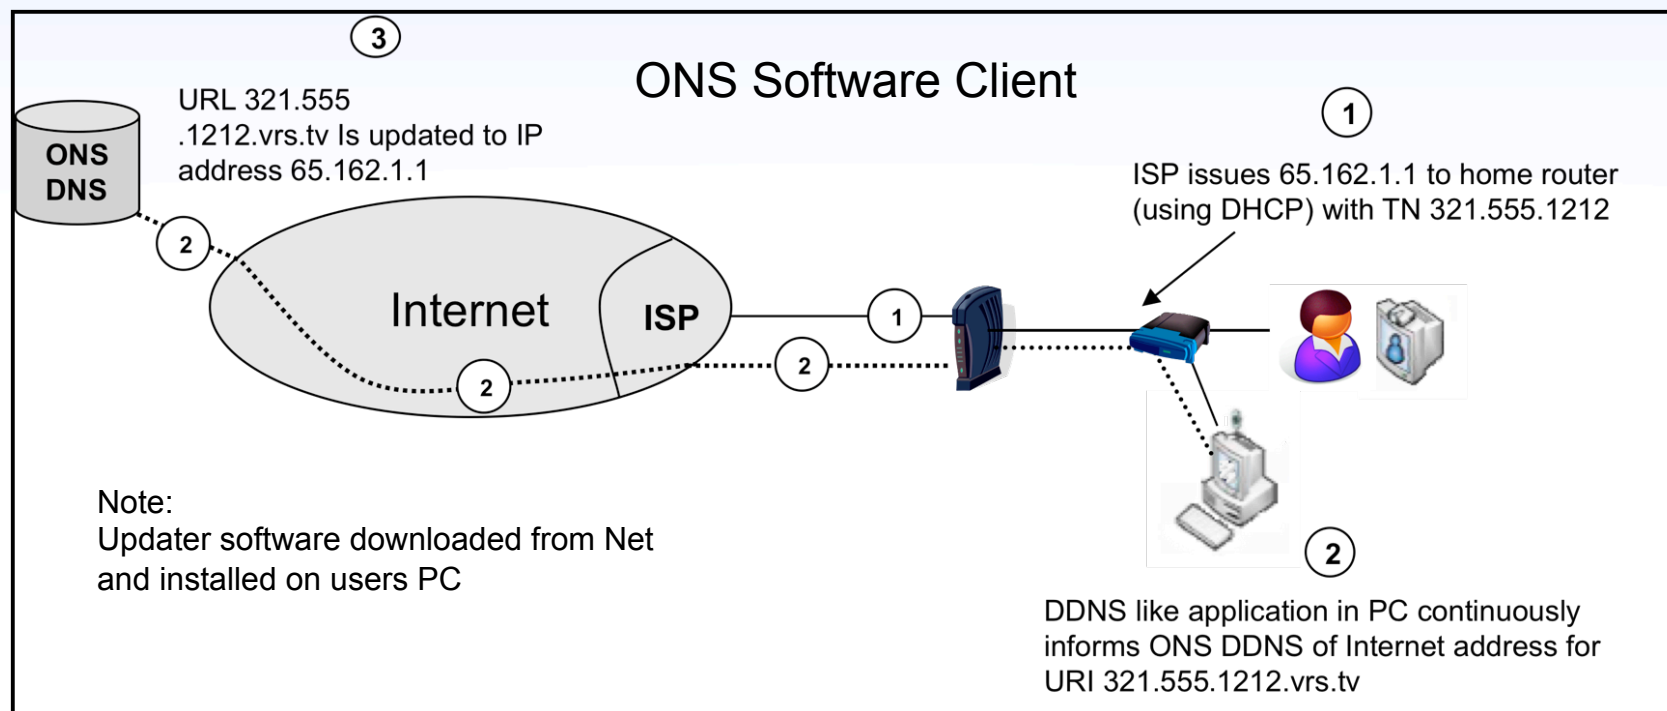

Hearing people call you on your 10 digit phone number

- ONS will operate a VoIP network for routing of PSTN calls to relay providers
- Providers true number portability
- Foundation for migration to SIP technologies
- Anyone can call you using your number...VoIP does it millions of times a day

Matching Phone Number to IP Address

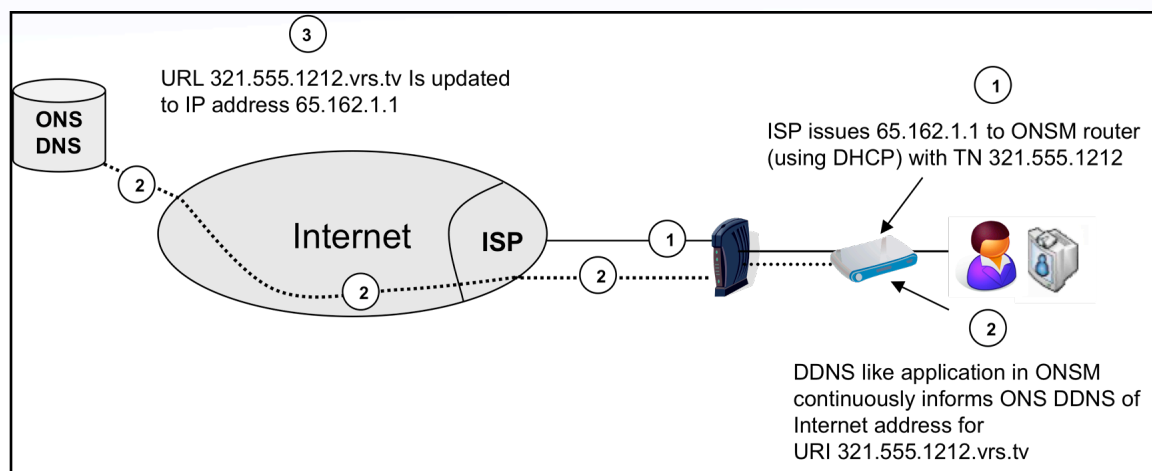

- Simple configuration...software tested and proven...Windows and MAC
- DynDNS System has over 2.5 million users, 100s M queries & updates daily
- Over 90% of today's users...do it this way
- Interim step...future phones will have this built in
- Software exists today and is virtually free

Matching Phone Number to IP Address

ONSM – Router with Updater Client

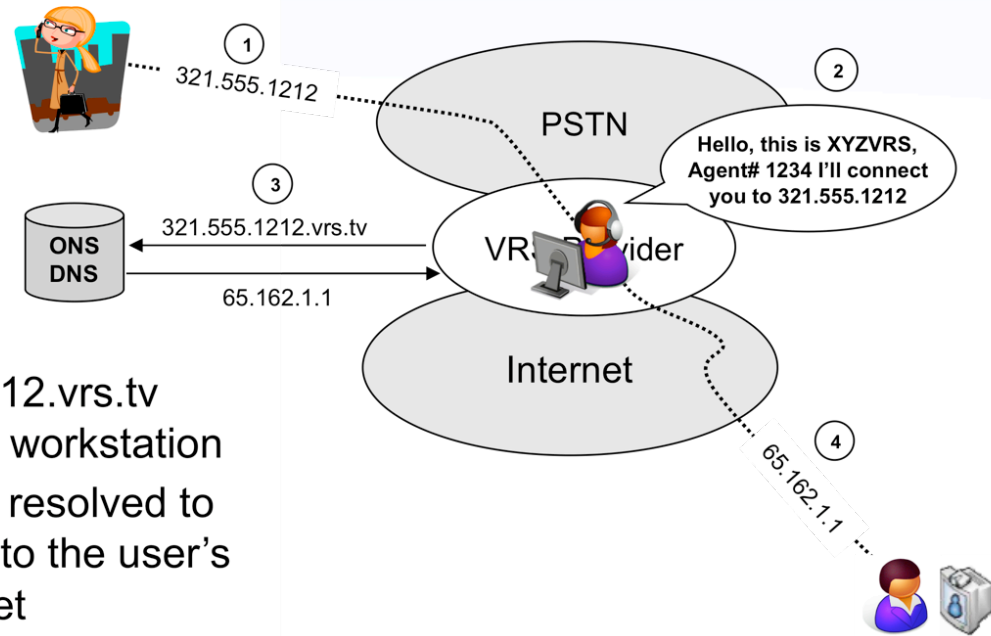

- Consumer routers
- User setup
- Remote assistance
- Cost effective < \$17
- Could distribute hardware through retail stores
 - Best Buy
 - Staples
 - Office Depot
 - Amazon

Only required if there is NO computer in the home

CSDVRS has installed over 5000 customers with software...no hardware needed

VRS Call from hearing person

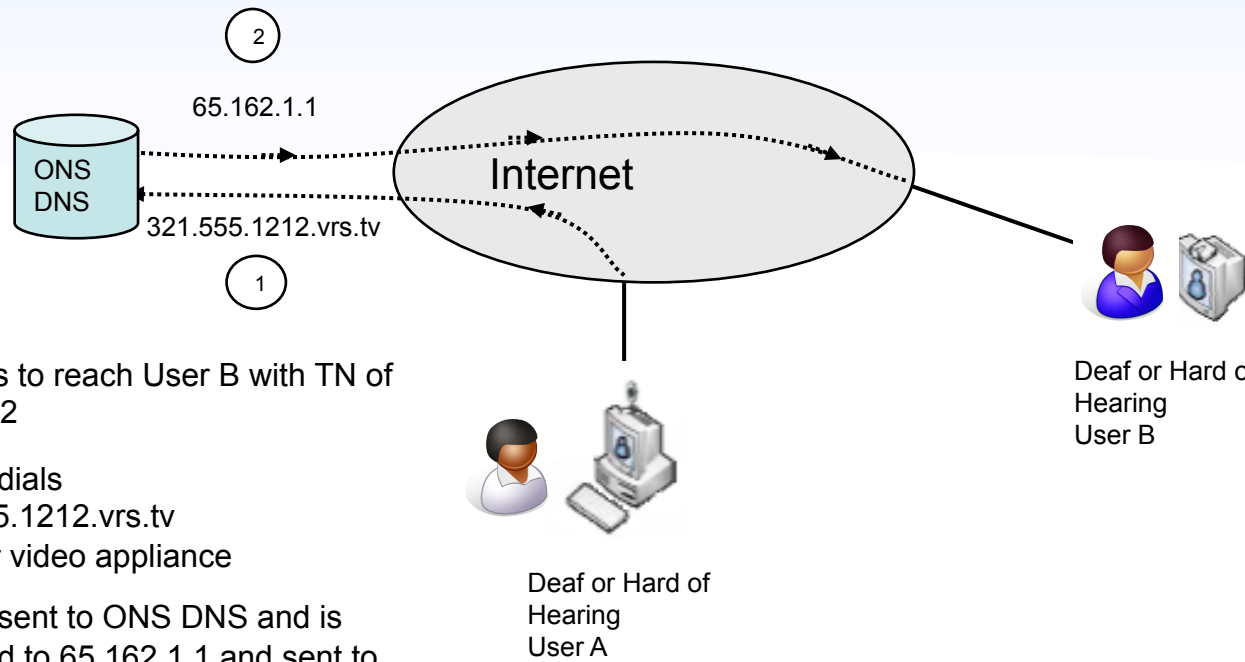

1. Hearing person dials 321.555.1212
2. Video Interpreter (VI) with VRS provider answers call and has TN of deaf person

- System available to all providers
- This is a basic DNS query...same as today...no new systems

Point-to-Point Call with 321.555.1212

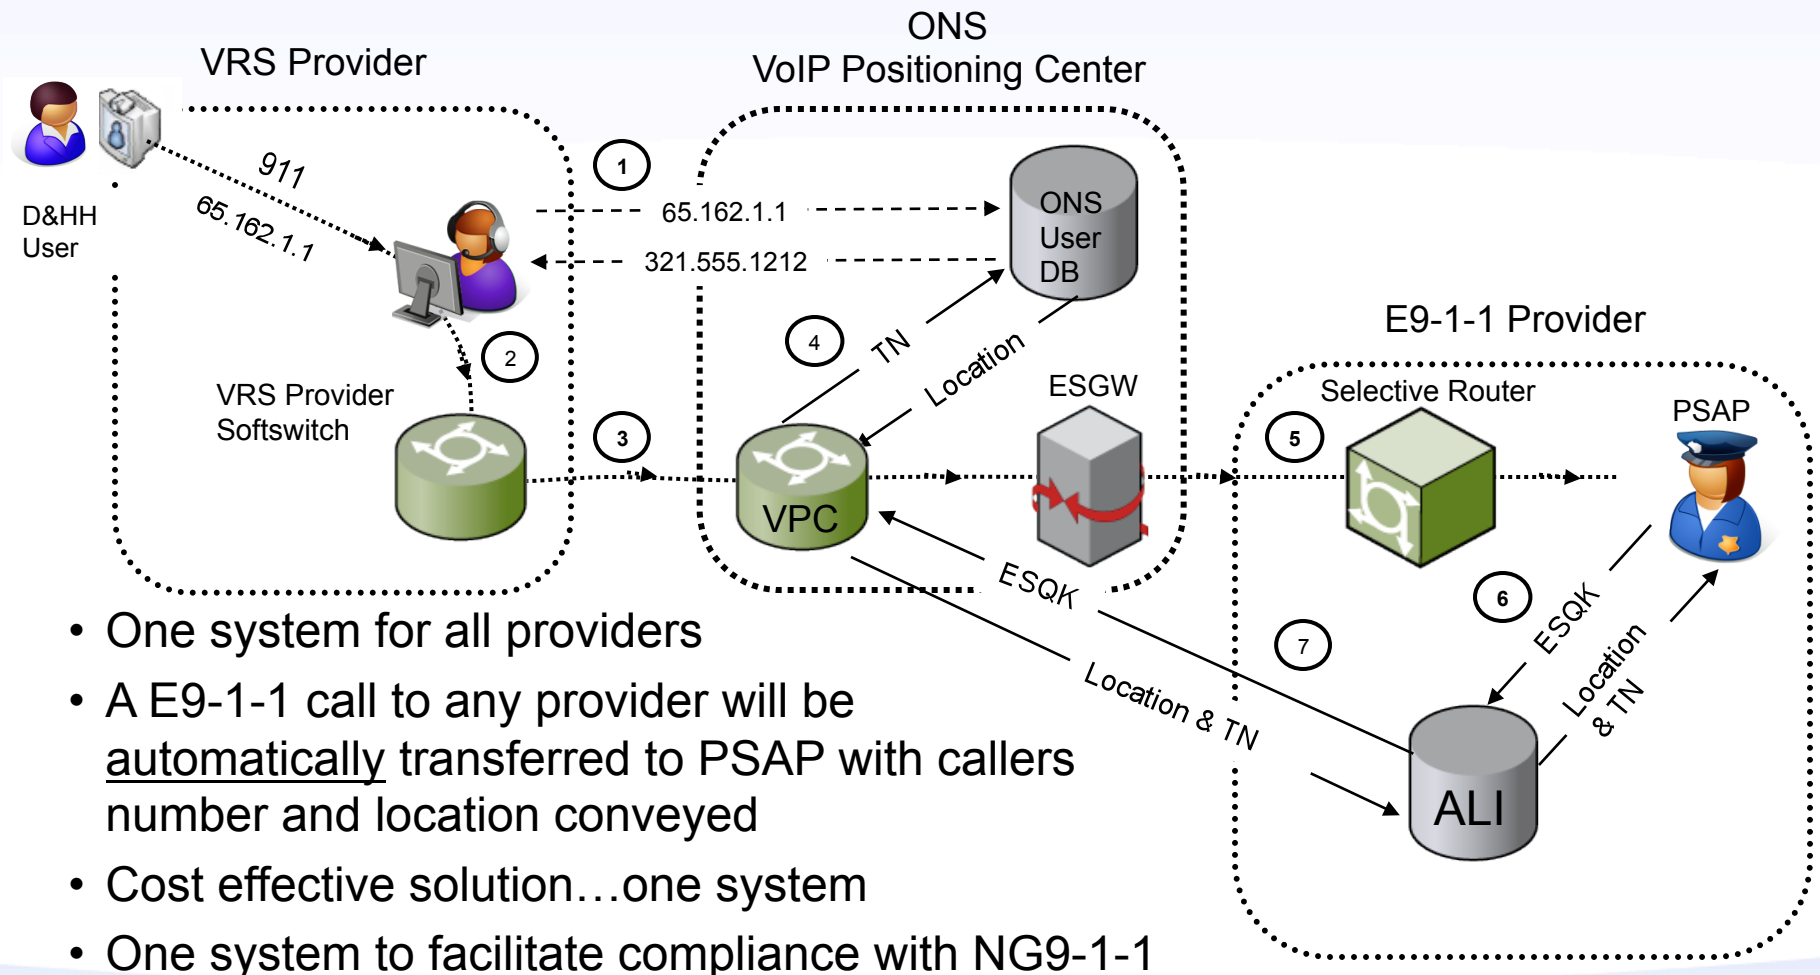

User A wants to reach User B with TN of 321.555.1212

1. User A dials 321.555.1212.vrs.tv on their video appliance
2. URL is sent to ONS DNS and is resolved to 65.162.1.1 and sent to User B video appliance

- USER A or B could be a hearing sibling or parent fluent in ASL using any compatible video equipment or software acquired anywhere...no relay provider required

ONS E9-1-1 System

- One system for all providers
- A E9-1-1 call to any provider will be automatically transferred to PSAP with callers number and location conveyed
- Cost effective solution...one system
- One system to facilitate compliance with NG9-1-1

ONS Advantages

- Neutral numbering administration...marketing not tied to numbering...video equipment not tied to services
- Universal E9-1-1 access...automatic call transfer by any provider...today...highly available E9-1-1...future
- Cost effective solution for industry and TRS fund: single system rather than 10-15 databases...levels playing field for providers
- Open system for all...calling with friends, family and business supported...both VRS and point-to-point

ONS Advantages

- Highly secure system that protects private location information: data encrypted – strict guidelines for provider access
- Ensures consistency in methodology and service quality: databases updated regardless of provider circumstances
- Provides for full numbering portability
- Supports existing network and evolution to newer communication protocols and technologies
- Minimizes slamming and fraud
